Archimedes, Galileo, and Newton, are alone worthy to be named with him in the history of science, and his real merit does not fall short of theirs. We have, in a previous number, given a rapid sketch of the order and subjects of the two first books of his Mecanique Celeste. To enter into a close investigation of the translation of Bowditch, would lead us into useless repetition. We therefore prefer to continue the analysis we there commenced of his fifth volume, being well assured that it will furnish to our readers topics of the most powerful interest. The XIIIth book of Laplace treats, in general, of the oscillations of the fluids that cover the planets. Of these, the most important to us are, the tides which take place in our own ocean. Newton first discovered the...
